

AMENDMENTS TO THE CLAIMS (THIS LISTING REPLACES ALL PRIOR LISTINGS):

1-20. (Canceled).

21. (New) An apparatus comprising:

a piezoelectric substrate comprising:

 a signal line comprising a first electrical port and a second electrical port;

 a first partial filter;

 a second partial filter connected in series with the first partial filter, the first partial filter

and the second partial filter being between the first and the second electrical ports;

wherein:

 the first partial filter comprises a first serial transducer and a second serial transducer located in series branches of the signal line, the first serial transducer and the second serial transducer being located in an acoustic path and acoustically coupled with one another, and

 the second partial filter comprises a first coupler transducer and an end-positioned transducer that are located in a double mode surface acoustic wave (DMS) path, the end-positioned transducer being positioned at an end of the signal line.

22. (New) The apparatus of claim 21, wherein the first electrical port comprises an asymmetrical electrical port having a signal-conducting terminal.

23. (New) The apparatus of claim 21, wherein the second electrical port comprises an asymmetrical electrical port having a signal-conducting terminal.

24. (New) The apparatus of claim 21, wherein the second electrical port comprises a symmetrical electrical port having multiple signal-conducting terminals.

25. (New) The apparatus of claim 24, further comprising:
a reflector between the first and second serial transducers and connected to one of the signal-conducting terminals of the symmetrical electrical port.

26. (New) The apparatus of claim 21, wherein each of the acoustic path and the DMS path are bounded on both sides by reflectors.

27. (New) The apparatus of claim 21, wherein the first partial filter further comprises one or more additional serial transducers located in the acoustic path and in a series branch of the signal line, the one or more additional serial transducers being electrically connected in series with the coupler transducers of the DMS path.

28. (New) The apparatus of claim 21, wherein the second partial filter further comprises one or more of the following: a second coupler transducer and an end-positioned transducer.

29. (New) The apparatus of claim 28, wherein the first and second coupler transducers and the end-positioned transducers located in the DMS path are arranged substantially alternately.

30. (New) The apparatus of claim 21, further comprising:
a reflector arranged between the first and second serial transducers.

31. (New) The apparatus of claim 21, wherein:
the first electrical port is connected to the first partial filter;
the second electrical port is connected to the end-positioned transducer; and

the first coupler transducer is connected in series with at least one of the first and second serial transducers.

32. (New) The apparatus of claim 21, wherein:

the first partial filter comprises an additional acoustic path that is connected with the first electrical port, the additional acoustic path comprising a parallel transducer that is connected between the signal line and ground.

33. (New) The apparatus of claim 21, wherein:

the first partial filter comprises an additional acoustic path that is connected with the first electrical port, the additional acoustic path comprising parallel transducers that are acoustically coupled with one another, each parallel transducer being connected between the signal line and ground.

34. (New) The apparatus of claim 21, wherein:

the end-positioned transducer comprises at least two partial transducers that are electrically connected with one another and connected in series between signal-conducting terminals of the second electrical port.

35. (New) The apparatus of claim 21, wherein a signal-conducting terminal of the first electrical port is connected to at least one of the first and second serial transducers.

36. (New) The apparatus of claim 21, wherein the first partial filter has an additional acoustic path that has at least one serial transducer, the additional acoustic path being connected with the first electrical port and being located along the signal line.

37. (New) The apparatus of claim 21, wherein the second partial filter further comprises a second coupler transducer.

38. (New) The apparatus of claim 37, wherein the end-positioned transducer is between the first coupler transducer and the second coupler transducer.

39. (New) The apparatus of claim 37, wherein:

- a first signal-conducting terminal of the second electrical port is connected to the first serial transducer;
- a second signal-conducting terminal of the second electrical port is connected to the second serial transducer;
- the end-positioned transducer is arranged along the signal line that is connected to the first electrical port;
- the first coupler transducer is connected in series with the first serial transducer; and
- the second coupler transducer is connected in series with the second serial transducer.

40. (New) The apparatus of claim 37, wherein:

- the second partial filter further comprises at least two end-positioned transducers between which the first coupler transducer and the second coupler transducer, the first coupler transducer and the second coupler transducer being connected in series and arranged next to each other.

41. (New) The apparatus of claim 21, further comprising:

- a serial resonator connected between the first electrical port and the end-positioned

transducer, the serial resonator having a constituent transducer and reflectors that bound the constituent transducer on both sides.

42. (New) The apparatus of claim 21, wherein:

the second electrical port is connected to an additional acoustic path comprising a first transducer and a second transducer that are acoustically coupled with one another, the first transducer and the second transducer being bounded by reflectors, a first signal-conducting terminal of the second electrical port being connected to the first transducer, and a second signal-conducting connection of the second electrical port being connected to the second transducer.
